

## 2. GLOBAL MARKETS: BUSINESS SCHOOLS WORLDWIDE

Capturing the best possible students and academics is a strategic way for a top business school to increase its influence. In this respect, five main decision factors exert a significant influence over prospective students and professors.

Certifications are a must-have but have become trivial among the business schools which are analysed in this report (most of them have already been granted the most widely recognized labels).

Conversely, alumni feedback and the reach and quality of the alumni network often make a difference. Also, matters of image (name, location, logo, slogan but also rankings) are playing an increasingly important role. International rankings remain by far the most watched indicator and business schools' most used advantage.

New industrial giants: (partly) born in the USA?

Economic power is not only about capturing the largest possible slice of the global economic pie. Much like in politics, power in business can be soft. In times when global competition is heating up in every globalised industry, soft economic power has become a weapon. Business is all about personal relationships, which is why networking possibilities rank among the most-watched indicators for students and academics.

Furthermore, if a country is able to develop a special connection with foreign populations, in this particular case foreign managers, it may in the end enjoy positive returns. Economic returns range from privileged relationships between companies and donations from foreign alumni through to human capital flight and bi-lateral agreements at State level. In this respect, the USA benefit from an unrivalled, global advantage. The UK in Europe and Japan in Asia also play a similar role albeit to a lesser extent. The battle for emerging talents has just begun.
