Ecolift 1st october 2007**

Ecolift Cleaner, for a better environment

DI environment involved in sustainable development for more than a decade, proposes to boats owners, operators and the nautical industry in general, an environment friendly concept to clean and maintain hulls.

The Ecolift cleaner has been designed for 6 to 12 m boats in its standard version for cleaning and careening purposes.

All navigating waters are subject to different types of foulings decreasing the performance of boats, deteriorating the integrity of antifoulings, and increasing the fuel consumption.

The Ecolift Cleaner is a fast washing and careening concept to be operated by one person alone and independently of any external help.

In less than 5 minutes the Boat is lifted up and the Ecolift user get access to his hull for 20 minutes to clean it.

This self-cleaning structure, which ensures permanent cleanliness, is associated with a comfortable and secured platform meeting the most demanding condition of use.

Management and disposal of waste products is a worldwide significant environmental concerns in Marinas. The Ecolift Cleaner is the premium answer for a better environment.

The Ecolift Cleaner is equipped with an effluent control machinery. The sea water used to clean the boat is filtered, so foulings, matters and oils are trapped in the integrated filters.

During this summer almost 300 boats used the Ecolift Cleaner unit in Cogolin on the French Riviera, a great success for this unit opened mid june 2007.

Captaincies, Marinas service management, boat brokers, insurance experts and maintenance facilities can operate the Ecolift Cleaner to provide better and cost effective service to the pleasure sailors.

Our company is expanding on the international market and is seeking distributors for the Ecolift Cleaner.
